***Response to Amendment***

1. This action is responsive to the amendment on 07/16/2009 **1-12** are pending.

**Claims 6, 12** have been canceled; **claim 1** has been amended,

2. Applicant's arguments, see Remarks, filed 12/14/2005, with respect to the drawing have been fully considered and are persuasive.

3. Applicant's argument filed on 07/16/2009 with respect to **claims 1-5, 7-12** have been fully considered and they are persuasive.

***Allowable Subject Matter***

4. **Claims 1-5, 7-12 are allowed**

5. **With respect to independent claims 1, Keshtbod (US Patent 4,527,255) Fig.**

**2** teaches a static memory means defining at least first and second nodes communicatively connected with read and/or write data lines and at least one non-volatile memory means associated with said static memory means, and writing data stored therein to said static memory means; said non-volatile memory means comprising a first non-volatile element having a control gate connected to a first node and a source connected to a second node, and a second non-volatile element having a control gate connected to the second node and a source connected to the first node, the drain of each non-volatile element being connected by means of a respective transistor to a supply means; characterized in that said respective transistors are arranged to isolate the drains of the first and second non-volatile elements from the supply means during a program cycle of the memory device. However Keshtbod is silent with respect

with the static memory means comprises a pair of cross-coupled inverters, each of the cross-coupled inverters including first and second transistors that are connected in series, sources of the first transistors of the cross-coupled inverters being connected to each other.

**Hirose et al. (US 6,363,011) Fig. 11** teaches the static memory means comprises a pair of cross-coupled inverters, each of the cross-coupled inverters including first and second transistors that are connected in series, sources of the first transistors of the cross-coupled inverters being connected to each other. However Hirose et al. is silent with respect to the drains of the first and second nonvolatile elements being connected to drains of the respective transistors, the supply means being connected to sources of the respective transistors, **the sources of the respective transistors being also connected to the sources of the first transistors of the cross-coupled inverters.**

**Miyagi (US Patent 6,515,907) Fig. 3** teaches static memory means defining at least first and second nodes communicatively connected with read and/or write data lines and at least one non-volatile memory means associated with said static memory means, and writing data stored therein to said static memory means; said non-volatile memory means comprising a first non-volatile element having a control gate connected to a first node and a source connected to a second node, and a second non-volatile element having a control gate connected to the second node and a source connected to the first node, the drain of each non-volatile element being connected by means of a respective transistor to a supply means; characterized in that said respective transistors are arranged to isolate the drains of the first and second non-volatile elements from the

supply means during a program cycle of the memory device. the static memory means comprises a pair of cross-coupled inverters, each of the cross-coupled inverters including first and second transistors that are connected in series, sources of the first transistors of the cross-coupled inverters being connected to each other. the drains of the first and second nonvolatile elements being connected to drains of the respective transistors However Miyagi is silent with respect to **the supply means being connected to sources of the respective transistors, the sources of the respective transistors being also connected to the sources of the first transistors of the cross-coupled inverters.**

there is no teaching, suggestion, or motivation for combination in the prior art to the drains of the first and second non-volatile elements being connected to drains of the respective transistors, the supply means being connected to sources of the respective transistors, the sources of the respective transistors being also connected to the sources of the first transistors of the cross-coupled inverters.

6. **With respect to dependent claims 2-5, 7-11** since these claims are depending on **claim 1**, therefore **claims 2-5, 7-11** are allowable subject matter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
